

Alfa Systems Pvt. Ltd. is proud to offer a series of high quality, high performance, Turning Centers from TITAN Machine Tools. The *SUPER-TURN* series incorporates design specifications that have been specifically tailored for the rigorous demands. The high level of craftsmanship combined with state of the art electronics insures a high degree of quality, guaranteed accuracy and relentless reliability.

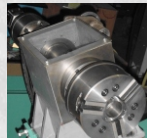

We manufacture both Linear Gang tooled lathes and Turret type Lathes with and without tailstock.

The TITAN digital drive servo motors assure a high degree of accuracy, reliability, and maintenance free operation. The X-axis ballscrew is a (32mm diameter ), which is powered by a TITAN 'A' series 12 motor that delivers smooth thrust.

Both X and Z-axis motors transmit power to the precision ballscrews. Positioning encoders are directly coupled to the ends of the servo motor for high precision positioning accuracy.
